SOUTHERN MAGNOLIA

{*magnolia grandiflora*}

tree care card

Congratulations on the receipt of your beautiful Magnolia Grandiflora tree. By following the growing and care information below you can grow this tree to add beauty and fragrance to your living space.

PLANTING & GROWING DIRECTIONS

1. Carefully unpack your Magnolia tree upon arrival. Remove burlap and plastic bag covering the container.
2. Find a sunny location (up to full sun) where it can receive as much natural light as possible. Full sun is preferred.
3. It is important to keep your tree moist but not excessively wet at all times. Water your tree twice a week until run off is sufficient.

CONTAINER: If you desire to grow your Magnolia tree in a container pick a larger container and use a general all purpose potting soil for the planting medium. You can prune and shape your Magnolia tree in the container once a year by conducting simple pruning techniques in February. Always check your container to see that the roots have ample enough room to grow.

LANDSCAPE: A lot of care has been taken in growing your Magnolia tree. Your Magnolia tree will become a specimen in your landscape. Pick a well drained location that receives full sun and follow the planting instructions on attached planting card. Add a general tree or shrub fertilizer every April 1st.
